

North Pacific Fishery Management Council
C-6 Halibut and Sablefish IFQ Program Review
October 8, 2016

The Council accepts the Halibut and Sablefish IFQ Program review as complete and final with the addition of the following information, to the extent practicable, as recommended by the AP and SSC:

- Add a section that describes the benefits and limitations of consolidation limits and entry level provisions with respect to overall program success and to the fleet consolidation that has taken place since IFQ Program implementation.
- Revise the description of the indices of community level engagement in IFQ fisheries to more clearly define the term engagement as it relates to multiple aspects of fisheries activity.
- Include graphics and maps that show the changes in quota share holdings for Alaska communities over time to better understand the effects of the program.
