2017 Inshore Salmon Savings Incentive Plan Agreement Annual Report

Amendment 110 IPA Identification Number 1

By John Gruver

Inshore Salmon Savings Incentive Plan Representative

Submitted to the

North Pacific Fisheries Management Council

March 15, 2018

<u>Introduction.</u> For 2017 all AFA inshore sector eligible catcher vessels were members of the Inshore Salmon Savings Incentive Plan (ISSIP) Agreement. The ISSIP was first submitted for approval by NMFS on September 30, 2010 and approved on November 5, 2010. An amended ISSIP Agreement was submitted for approval on June 21, 2011. NMFS approved the amended Agreement on June 28, 2011. The ISSIP approved on June 28 continued in place for the 2015 A Season.

The ISSIP was amended for a second time in the spring of 2015; the amended ISSIP was approved by NMFS on June 5, 2015, in time for the B season. The 2015 amended ISSIP included substantive changes to the operational components of the ISSIP as well as membership changes due to vessel retirement/replacement under the Coast Guard Act of 2010, vessel name changes, vessels changing their inshore coop membership, and participation in the inshore open access sector.

To comply with the Amendment 110 regulations, the ISSIP was amended a third time in January of 2017, ahead of the 2017 A season. Some requirements found in the Amendment 110 regulations were added in the 2015, the remaining requirements were included in this latest version and are explained in Section D of this report.

2017 Pollock Harvest and Salmon Bycatch Summary.

In 2017 the ISSIP members caught a total of 15,154 Chinook salmon; 9,162 in the A Season and 5,992 in the B Season. The total 2017 pollock harvest by ISSIP members was 589,663 metric tons; 244,485 metric tons in the A Season and 345,178 metric tons in the B Season. Annually that calculates to 39 metric tons of pollock harvest for every one bycaught Chinook salmon; an annual rate of 0.0257 Chinook per mt of pollock. Seasonally, the A Season Chinook bycatch was 26.7 metric tons of pollock for every one bycaught Chinook salmon; an A Season rate of 0.0375 Chinook per mt of pollock. The B Season yielded 57.6 metric tons of pollock for every one bycaught Chinook per metric ton of pollock harvest.

Figure 1. Thirteen Year History of Chinook Salmon Bycatch by the Inshore Sector.

All 2017 pollock fishing by the ISSIP members was completed by October 20th.

Total B season chum salmon bycatch by the ISSIP members was 154,158 salmon. Employing the most recent genetics stock composition analysis for chum bycatch in the pollock fishery (2015 Kondzela, et. al.), the western Alaska origin portion of the bycatch is 43,346 chum salmon.

The ISSIP members participate is an industry-wide data sharing agreement. A copy of the Agreement is found at the end of this report.

Annual Reporting Requirements.

Amendment 110 regulations require each Incentive Plan Agreement (IPA) representative to submit an annual report to the North Pacific Management Council. The annual report is required to address each of the topics found in the following Sections A through G.

Section A. A comprehensive description of the incentive measures, including the rolling hot spot program and excluder use, in effect in the previous year.

The following summary comes from page 5 of the Inshore Salmon Savings Incentive Plan Agreement approved by NMFS on January 19, 2017 captures the main elements of the ISSIP that were in place beginning for the 2017 A season.

2. Agreement Summary and Incentive Plan Description. The vessels participating in this IPA receive an annual allocation of Chinook salmon bycatch units, which limits their Chinook salmon PSC bycatch to their pro-rata share of the Chinook salmon PSC performance standard, less Insurance Pool deductions for Inshore Cooperative Vessels. A vessel can earn additional Chinook bycatch units by catching fewer Chinook salmon PSC as bycatch than the amount of its annual allocation, at a rate of one (1) additional unit for every three (3) allocated units that are not used. The Insurance Pool is a Chinook by catch unit reserve, which is available to Inshore Sector Cooperative Vessels whose Chinook bycatch exceeds the number of bycatch units they hold. Inshore Sector Cooperative Vessels using Insurance Pool bycatch units are required to repay the Insurance Pool, and may be required to pay an additional Insurance Pool usage penalty. If the inshore sector's Chinook salmon bycatch exceeds its performance standard for two (2) years in a six (6) consecutive year period, each Cooperative is required to take all actions necessary to insure that the Chinook salmon bycatch of its Vessels does not exceed the Annual Threshold Amount for a third (3rd) year in a seven (7) consecutive year period. The Manager will issue stop fishing orders to prevent exceeding the Performance Standard a third time in seven consecutive years as may be appropriate. A rolling hot spot closure program closes areas of relatively high Chinook or chum salmon PSC bycatch to vessels that have relatively high rates of Chinook and chum salmon bycatch.

Savings Credits. As described in the agreement summaries, the primary incentive for members of the ISSIP to minimize Chinook bycatch whenever possible is by earning additional Chinook

bycatch units called Savings Credits. Each ISSIP vessel is assigned an initial set of bycatch units called Base Cap Credits. Base Cap Credits are calculated as a vessel's share of the inshore sector's Chinook bycatch Performance Standard less an initial deduction for funding an Insurance Pool (26,484 minus 1,000 for Insurance Pool, leaving 25,484 for Base Cap Credits for the vessel allocations). Each vessel's Base Cap allocation is made pro rata to the vessel's AFA inshore pollock delivery history.

On an annual basis, a vessel earns one Savings Credit for every 3 of its Base Cap credits not caught in a year. Without having earned Savings Credits, a vessel may never exceed its share of the Performance Standard (less the insurance pool reserve). In other words, a vessel may not utilize its share of the 33,390 inshore sector upper bycatch Chinook Limit - the hard cap - without having earned Savings Credits during the previous three years. Therefore, without having earned Savings Credits, an Inshore SSIP vessel operates as if it were fishing under a 25,484 Chinook hard cap.

Savings Credits, once earned, are not held in perpetuity, but have a lifespan of 3 years. Therefore ISSIP vessels are not able to "rest on their laurels" after a series of low bycatch years. Because the nature of Chinook bycatch is so variable from one year to the next, vessels are incentivized to generate maximum Savings Credits each year.

<u>Individual Vessel Allocations.</u> IPAs are required to ensure that each vessel will manage their bycatch in a manner that will keep total bycatch below the sector Performance Standard. The Inshore SSIP accomplishes this requirement by 1) individual vessel allocations from a Base Cap pool that is lower than the inshore sector's Performance Standard, and 2) vessels may only exceed their Base Cap allocation if they have earned Savings Credits. As previously stated, a vessel must have previously avoided 3 Chinook salmon under their Base Cap allocation to take one bycaught Chinook over their Base Cap allocation; assuring that at no time, over a series of years, may an individual vessel have taken a total average amount of Chinook bycatch in excess of the Performance Standard.

Transfers. Several transfer types defined in the ISSIP cover situations that package together both pollock and salmon. These transfers are intended to allow coops to continue operations under the ISSIP in a manner consistent with pollock transfers that took place within each coop prior to implementation of Amendments 91 and 110. Called Blended Paired Transfers and Trip Specific Transfers, these transfers combine both pollock allocations and Salmon Credits. Trip Specific transfers are made in association with a specific delivery's fish ticket. The SSIP also provides transfers of pollock and salmon for very specific conditions pertaining to hardship situations and season completing "mop-up" fishing.

The SSIP does provide for the transfer of Salmon Credits without an associated amount of pollock - called Base Cap Transfers – however, there are limitations. Transferors may transfer their initially assigned Base Cap Credits to another vessel and, in doing so, may restrict the use

of their own Savings Credits in that year. (Savings Credits themselves are vessel specific assignments and are not transferable.) Transferees may have to acquire more Salmon Credits than they need for fishing to cover a Transfer Tax. Salmon Credits used to pay a Transfer Tax are retired from the program for the remainder of the year and therefore reduce the overall cap by the tax amount.

Inter-sector transfers, transfers from one pollock sector to the inshore sector, while allowed under the Amendment 110 regulations are not freely allowed under the SSIP rules. Inter-sector transfers may not be used in a way that puts the inshore sector in jeopardy of exceeding the inshore Performance Standard.

Insurance Pool. As both a protective measure and an incentive measure, the SSIP requires each member to contribute to a collective insurance pool of 1,000 Chinook. The pool is in place to buffer vessels that may exceed their available credit limit in each season against regulatory caps. Each vessel's initial A season Chinook allocation is made after their pro rata contribution to the Insurance Pool has been deducted from the overall A season limit.

To further incentivize vessels from using the insurance pool, and take precautionary steps towards not exceeding their salmon credit allocation, credit withdrawals from the insurance pool carry a "use penalty" ranging from 150% to 300% of the initial insurance pool draw (the rate applied is based on the precautions the vessel exhibited for the trip that triggered the overage).

Rolling Hot Spot (RHS) Program. The ISSIP includes a rolling hot spot component for both Chinook and non-Chinook (chum) salmon. While not a direct incentive based element, there is an incentive for vessels to avoid being assigned to Tier 2. While the inclusion of the RHS component to the ISSIP provides a strong mechanism for minimizing bycatch, more importantly it provides the vessels with bycatch data that identifies areas with the highest know salmon bycatch.

The ISIPP RHS program closes fishing grounds to individual vessels based on their current salmon bycatch rates. Weekly, each ISSIP vessel assigned to either of two tier levels based on their previous 3 week bycatch rate; Tier 1 vessels are exempt from the weekly closure(s) and Tier 2 vessels are closed out of the closure(s) for the following week. The RHS program operates in both the A and B seasons for Chinook salmon and during the B season for non-Chinook salmon. During B season Chinook hot spots are prioritized over non-Chinook hot spots. When Chinook bycatch exceeds .035 fish per metric ton of pollock harvest hot spot closures for non-Chinook salmon are suspended while Chinook hot spots are implemented.

There were no violations of the RHS program in 2017.

Chinook Conservation Area Agreement. This area has been identified with a history of consistently high Chinook bycatch during the winter fishery. Located in the southeastern Bering Sea, the Chinook Conservation Area is closed to pollock fishing during the A season. The

CCAA plays a major role in reducing Chinook bycatch in the A Season and while it may not be characterized as an incentive measure, its mandatory inclusion exemplifies the overall commitment members of the ISSIP have towards reducing Chinook bycatch.

Figure 2. Chinook Conservation Area

There were no violations of the CCAA in 2017.

<u>Salmon Excluder Use.</u> The ISSIP requires all A season tows be made with a salmon excluder and all B season tows conducted after August 31st to be made with a salmon excluder as well. In 2017, recognizing certain contingencies, there were only two vessels that did not use a salmon excluder device during fishing operations. These two vessels operated trawl nets that use fish pumps to get the fish aboard rather than hauling the codend up a stern ramp. This type of net associated with a pump does not support the use of an effective excluder at this time.

October Fishing Restrictions. Vessels fishing pollock in the month of October may not exceed the "September Chinook Bycatch Standard". The "Standard" is defined as having a bycatch rate that exceeds two (2) standard deviations above the mean September ISSIP bycatch rate from the years 2011 through 2016 (0.103 Chinook per metric ton of pollock catch). Vessels that are not able to maintain a Chinook bycatch below the standard are prohibited from fishing for the remainder of the B season.

<u>Section B. A description of how these incentive measures affected individual fishing</u> vessels.

A vessel specific allocation of Chinook salmon provides a very strong incentive for individual vessels to reduce their bycatch. However, when a fisherman has progressed far enough into a low bycatch season that the vessel's limit is no longer a constraint, there is a possibility that a vessel may let their bycatch reduction efforts relax. However, the ISSIP rules provide little to no opportunity for a captain to relax by keeping the incentive strong at all levels of Chinook encounters throughout the season. The ISSIP provides continuous motivation to fishermen for

the reduction of Chinook bycatch. Maintaining low bycatch throughout the course of a season is an opportunity to increase Savings Credits.

Without having earned Savings Credits an ISSIP vessel is restricted to its share of the inshore Performance Standard (less the SSIP Insurance Pool deduction as described earlier). An ISSIP vessel that has maximized its available Savings Credits increases its annual limit by 26%. The possibility of obtaining, and maintaining, a 26% increase of available bycatch credits when most needed is very difficult to ignore – essentially an insurance policy. Vessel operators never know what the future holds in terms of Chinook encounters, therefore captains are constantly driven to stay below the Performance Standard. A retrospective of Chinook bycatch history in the Bering Sea pollock fishery show that high bycatch years are most likely come in groups, therefore no matter how high the presence of Chinook on the pollock grounds in one year, it could very easily be even higher the following year. This scenario is well recognized by the ISSIP fleet and provides a strong incentive to 1) always earn the maximum amount of Savings Credits possible, and 2) avoid putting yourself in the situation of having to use Savings Credits whenever possible.

Additionally, along the lines of "insurance", having earned Savings Credits not only gets a boat through the high bycatch years, maximizing Savings Credits is also a way to access more pollock quota beyond a vessel's initial allocation. The SSIP not only inspires the reduction of Chinook bycatch, it promotes the possibility of additional pollock harvest by the fishermen that have managed their salmon credit allocations more frugally.

The SSIP rules cause its member vessels to be independently responsible for their future access to pollock by maintaining low Chinook bycatch. Consequently, each tow selection is made with considerations for both pollock harvest and Chinook avoidance in mind. This is most evident in the changes in seasonal fishing patterns; especially during the A season. There are very few instances of individual tows being made in areas suspect for typically having high Chinook bycatch despite the assumption that pollock in that area may be of higher value than pollock in low Chinook bycatch areas.

Section C. An evaluation of whether incentive measures were effective in achieving salmon savings beyond levels that would have been achieved in absence of the measures including the effectiveness of:

1. <u>Measures to insure that chum salmon were avoided in areas and at times where chum salmon are likely to return to western Alaska.</u>

The ISSIP operates with its strictest RHS trigger mechanisms during the months of June and July, when the chum salmon genetics indicate that western Alaskan chum salmon are most likely to be present on the eastern Bering Sea pollock grounds. The ISSIP also provides for the Monitoring Agent to prioritize the weekly RHS closures in a manner that will most likely protect

western Alaskan origin chum salmon (Section 9.4.6.1 of the ISSIP). The ISSIP's chum salmon RHS program runs at the individual vessel level as opposed the Amendment 84 Intercooperative program that operated at the coop level. Under the ISSIP RHS program vessels are individually assigned to a tier and do not have their high bycatch chum tows "diluted" by low bycatch tows made by other coop members.

During the B season the inshore fleet typically fishes in the southeastern Bering Sea; minimizing travel time to and from their processing plants in an effort to provide the freshest fish possible to their market. The following Figure 3 covers all chum salmon RHS closures for the 2017 B season.

Figure 3. 2017 Chum Salmon RHS Closures

During the early part of the B season, defined in the 2015 genetics stock composition analysis for chum bycatch in the pollock fishery (Kondzela, et. al.) as weeks 24-32 (June to mid August) bycatch from Cluster 1 is considered to have the highest presence of western Alaska chum salmon. The presence of western Alaska chums begins to taper off after mid August.

The 2017 ISSIP chum RHS closures ran through August 17th. Beginning August 18th, the presence of Chinook salmon on the fishing grounds increased and the RHS system switched over

to protection measures for Chinook salmon (ISSIP Section 9.5 Chinook Rolling Hot Spot Program Priority) for the remainder of the B season.

Due to the concentrated focus of the chum salmon RHS program during the peak weeks that western Alaska chum salmon were present on the fishing grounds and because this RHS program operates at the individual vessel level there clearly was a reduction in western Alaska chum salmon bycatch compared to not having an RHS program in place.

2. <u>Restrictions or penalties that target vessels that consistently have significantly higher Chinook salmon PSC rates relative to other vessels.</u>

Initial vessel Chinook salmon PSC limit allocations are sourced from the inshore performance standard (26,485 minus a 1,000 fish insurance pool deduction), not the inshore PSC limit of 33,390 Chinook. Vessels are restricted to catching only their initial allocation unless they have individually earned Savings Credits as explainer previously in this report. Having, and consequently using, Savings Credits is the only way each individual vessel may continue to fish above the performance standard.

Vessels that are not able to fish below their initial allocation year on a continual basis are at risk of not fully funding their Savings Credit account and may very well find themselves having to stop fishing before catching their entire pollock allocation. Vessels that have successfully funded their Savings Credit account may then find themselves in the enviable situation of not only catching their own pollock allocation, but also pollock left behind by vessels that had to stop fishing due to higher Chinook bycatch rates.

Vessels exceeding their salmon credit allocation automatically draw their overage amount from the insurance pool. Vessels with an overage are penalized by having their future credit allocation reduced until they repay their insurance pool draw plus penalty credits.

The Chinook RHS program runs at the individual vessel level, like the chum salmon RHS program, and consequently holds each vessel responsible for maintaining as low of a Chinook bycatch rate as possible to avoid restricted access to the fishing grounds. Vessels with higher relative Chinook bycatch rates will typically be placed in Tier 2 of the RHS program resulting in restricted access to the fishing grounds for an entire week. Unless a vessel is able to bring its relative bycatch rate down, it may find itself with Tier 2 status for multiple weeks.

3. Restrictions or performance criteria used to ensure that Chinook PSC rates in October are not significantly higher than in previous months.

Vessels fishing pollock in the month of October may not exceed the "September Chinook Bycatch Standard". The "Standard" is defined as having a bycatch rate that exceeds two (2) standard deviations above the mean September ISSIP bycatch rate from the years 2011 through 2016 (0.103 Chinook per metric ton of pollock catch). Vessels that are not able to maintain a Chinook bycatch below the standard are prohibited from fishing for the remainder of the B season.

The majority of the ISSIP member vessels had completed their pollock fishing prior to the month of October. A total of 32 deliveries were made during the month of October by 11 unique vessels. No vessels were issued a stop fishing order in 2017. One vessel had exceeded the September Standard and stopped fishing without needing to be ordered to do so. Prior years saw much more fishing effort in October.

Section D. A description of any amendments in the terms of the IPA that were approved by NMFS since the last annual report and the reasons that the amendments to the IPA were made.

As mentioned at the beginning of this report, the ISSIP was amended, and accepted by NMFS, in January of 2017 prior to the start of the 2017 A season. The amended ISSIP included the following additions and measures.

- 1. The Bering Sea Fisherman's Association (BSFA) has been named as ISSIP's Third Party group. The ISSIP has added provisions in Section 9, the Rolling Hot Spot Program, that provide for the submission of RHS closure area announcements and notice of RHS violations to BSFA.
- 2. Section 2 of the ISSIP IPA "Agreement Summary and Incentive Plan Description" was provided to help locate within the ISSIP where each of the thirteen Amendment 110 required IPA descriptions (as found on pages 19 and 20 in the 679.21 Prohibited Species Bycatch Management regulations) with references as to where detailed elements of those requirements may be found in the ISSIP IPA.
- 3. In Section 8 of the ISSIP IPA General Fishing Restrictions and Prohibitions are the newly added restrictions placed on ISSIP vessels fishing in the month of October. Vessels fishing in the month of October must maintain a Chinook bycatch rate that does not exceed the "September Chinook Bycatch Standard". The "September Chinook Bycatch Standard" is calculated as two (2) standard deviations above the mean September ISSIP bycatch rate established during the years 2011 through 2016. Vessels that are not able to maintain a Chinook bycatch below the standard are prohibited from fishing for the remainder of the B season.
- 4. Section 9 of the ISSIP IPA "Rolling Hot Spot Program" has been rewritten to include both Chinook and chum salmon RHS programs with priorities for protecting Chinook salmon when both Chinook and chum salmon are present on the fishing grounds.
- 5. Section 9.6 allows the ISSIP Monitoring Agent to share specific bycatch data with all other Amendment 110 IPAs. A copy of this Data Sharing Agreement is found at the end of this report.

Section E. Seasonal Allocations and Harvests of Pollock and Chinook.

Data Sharing Agreement.

BERING SEA SALMON BYCATCH DATA SHARING AGREEMENT

This agreement is entered into by and among the parties to the Inshore Salmon Savings Incentive Plan Agreement, Mothership Salmon Savings Incentive Plan Agreement and the Chinook Salmon Bycatch Reduction Incentive Plan and Agreement (each, an "<u>IPA</u>" and collectively, the "<u>IPAs</u>") as of ______, in consideration of the following facts:

- A. The North Pacific Fishery Management Council and the National Marine Fisheries Service have approved and implemented a revised salmon bycatch management program for the Bering Sea pollock fishery that includes annual bycatch limits for Chinook salmon and incentive plan agreements designed to minimize Chinook and chum salmon bycatch at all levels of salmon and pollock abundance;
- B. The inshore, mothership and catcher-processor sectors of the Bering Sea pollock fishery and the western Alaska Community Development Quota groups have developed three different Chinook and chum salmon incentive plan agreements with different components that reflect the different fishing areas and methods employed by the sectors, although each agreement includes some form of incentive based on the identification of bycatch avoidance areas;
- C. Under the revised Bering Sea salmon PSC management regulations, each IPA is required to have its vessels enter into a fishery-wide in-season data sharing agreement (per 50 C.F.R. § 679.21 (f)(12)(iii)(E)(10));

Now, therefore, the parties to the three Bering Sea salmon bycatch IPAs agree as follows:

- 1. <u>Release of Confidential Data.</u> Each IPA vessel's VMS tracking data, State and Federal landing reports and observer data shall be released to Sea State, Inc. ("<u>Sea State</u>")as soon as commercially practicable.
- 2. <u>Data Use and Distribution</u>. SeaState may use all IPA vessel VMS tracking data, landing reports and observer data it receives under this Agreement to implement the provisions of each IPA, but shall not release such data, or calculations made from such data, except as provided in Sections 2.1 through 2.3, below.
- 2.1 Sea State may release summaries of pollock catch, Chinook and chum bycatch and Chinook and chum bycatch rates to IPA participants to assist them in avoiding Chinook and chum salmon bycatch.
- 2.2 Sea State may release VMS tracking data from relatively high-bycatch hauls, defined as the top twenty-five percent (25%) of hauls or trips exceeding a specific base rate in a given week, by distributing them directly to IPA participants, and/or making them available on a password-protected web site with access limited to IPA participants.
- 2.3 Sea State may release weekly Chinook and chum salmon bycatch avoidance area maps, by distributing them to all IPA participants, and/or by making them available on a password-protected web site with access limited to IPA participants.

- 3. <u>Indemnification</u>. Any and all claims against Sea State arising out of or relating to services in connection with this Agreement, other than those arising out of gross negligence or willful misconduct, are hereby waived and released. Further, the IPA participants shall jointly and severally indemnify, defend and hold Sea State harmless against any third party claims asserted against Sea State arising out of or relating to services in connection with this Agreement, other than those arising out of gross negligence or willful misconduct by Sea State.
- 4. <u>Term and Termination</u>. This Agreement shall take effect as of its execution by the authorized representatives of the parties to each of the IPAs. This Agreement shall remain in effect as long as two or more IPAs are in effect.
