Over the past few months I have visited with many charter people, we all agree that the Halibut issue is out of hand and needs immediate action from the comm and NOAA- I think that the entire State of Alaska be the same and to heck with zones period make it one Halibut per day, I have changed my opinion on annual as most guests only fish for 3 to 4 days Here is what I am hearing and one is a very large boat rental Lodge (30 Boats) he is firm about state wide one halibut per day and no zones, I totally agree, this puts all of us on a fair playing field, will tourism be hurt?- absolutely not and will actually increase the dollars spent in Alaska by fishers- also The Halibut regs should apply to resident as will as the non-resident, If an Alaskan comes to any other state that I know of he gets the same limit and that state resident-- just a fair way if doing it- The Lodge owner had a lot to say about the subsistence fishery, this should be eliminated for Halibut, a resident Alaskan at one fish a day cannot eat all he would be allowed to catch- Also the by catch is here and a real problem that should be dealt with now and not study to death as the Halibut will only suffer more- We have watched over many years the King Salmon disaster and now the Halibut are in dire trouble- I send this as a concerned person who will not be in the Charter business much longer any way- Larry Jarrett
